SAP IS Retail Landscape

POSDM

* SAP POS Data Management is an application for processing and analyzing POS information. As a stand alone, R/3 independent, point solution it offers comprehensive point-of-sale data management. It can:

* Load POS sales data with enhanced performance over an inbound interface into BI

* Analyze the data in BI

* Provide clean results of the analyses to other applications over defined interfaces

* The central platform for POS DM is currently SAP BI which provides the basic tools for data staging and reporting
